

## Question:

Mishka bought 3 pairs of shorts, 3 pairs of pants, and 3 pairs of shoes. One pair of shorts costs \$16.50. One pair of pants costs \$22.50 and one pair of shoes costs \$42. How many dollars did Mishka spend on all the clothing items?

## Reasoning + Answer:

<think> Mishka spent \$16.50 \* 3 dollars on shorts. Mishka spent \$22.50 \* 3 dollars on pants. Mishka spent \$42 \* 3 dollars on shoes. Total amount of money spent by Mishka = \$16.50 \* 3 dollars + \$22.50 \* 3 dollars + \$42 \* 3 dollars. Total amount of money spent by Mishka = (16.50 + 22.50 + 42) \* 3 dollars. Simplifying the equation 16.50 + 22.50 + 42 = 65.65 \* 3 = 195 dollars. Total amount of money spent by Mishka = 195 dollars. </think> <answer> 195 </answer>
