Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

A. follicle-stimulating hormone

B. oxytocin

C. pituitary gland

D. hypothalamus

E. gonadotropin-releasing hormone

F. luteinizing hormone

G. testosterone

Reasoning + Answer:

<th ink >

the feedback loop in men regulating sex hormone production involves a complex inter play of hormones and glands .

pit uit ary gland produces follic le -st im ulating hormone (FS H) and l ute in izing hormone (L H) which stimulate the production of sex hormones in the test es .

hyp oth alam us controls the pit uit ary gland by producing gon ad ot rop in -re leasing hormone (G n RH) that stimulates the release of F SH and LH .

oxy toc in is primarily involved in social bonding and not directly in sex hormone regulation .

test osterone is a sex hormone produced in the test es , not a regulator of its production .

the feedback loop aims to maintain a balance of sex hormones , and oxy toc in , testosterone , and the pit uit ary gland (as an end organ) are not part of the regulating feedback loop of the production of sex hormones in males .

so , oxy toc in and testosterone can be excluded from the feedback loop .

the pit uit ary gland is part of the feedback loop as it produces the hormones that stimulate the production of sex hormones in the test es .

hyp oth alam us and gon ad ot rop in -re leasing hormone (G n RH) are crucial in controlling the pit uit ary gland 's release of F SH and LH .

fol lic le -st im ulating hormone (FS H) and l ute in izing hormone (L H) are the two hormones from the pit uit ary gland , involved in the feedback mechanism .

the exclus ions are oxy toc in , and a couple more things .
