Question:
Josh decides to try flipping a house. He buys a house for $80,000 and then puts in $50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?
Reasoning + Answer:
<think>Josh buys a house for $80,000 and puts in $50,000 in repairs, so the total amount
spent is: \[80,000 + 50,000 = 130,000 \text{dollars} \] The value of the house
increased by 150%, so the increase in value is: \[130,000 \times \frac{150}{100} =
130,000 \times 1.5 = 195,000 \text{dollars} \] Thus, the new value of the
house is: \[80,000 + 195,000 = 275,000 \text{dollars} \] The profit Josh made
is the difference between the new value of the house and the total amount he spent: \[275,000
- 130,000 = 145,000 \text{dollars} \]</think><answer>145000</answer>
