Question:
Josh decides to try flipping a house. He buys a house for $80,000 and then puts in $50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?
Reasoning + Answer:
<think>First let's calculate the new value of the house after the repairs. Initially the house was worth 80000 dollars. After the repairs. Josh invested an additional 50000 dollars. Therefore the total cost of the house after repairs is 80000+50000=130000 dollars. Now let's calculate the increased value of the house. We know that the repairs increased the value of the house by 150%. To calculate the increased value. 150% of 130000 dollars. Can be calculated as 1.5*130000=195000 dollars. Therefore the new value of the house is 130000+195000=325000 dollars. Now let's calculate the profit Josh made. He bought the house for 80000 dollars and invested an additional 50000 dollars in repairs. Therefore the total cost he invested is 80000+50000=130000 dollars. He sold the house for 325000 dollars. Therefore the profit he made is 325000-130000=195000 dollars. Therefore Josh made a profit of 195000 dollars.</think><answer>195000</answer>
