Question:

Karan borrowed $3,650 for five months at an interest rate of 10%. She has to pay an equal amount every month. How much does she have to pay per month?

Reasoning + Answer:

<think> Karan borrowed $3650 for five months So, total number of months is 5 She has to pay an interest rate of 10% So, interest amount will be 10% of 3650 which is (10 / 100) * 3650 = 365 Now she has to pay this interest amount along with principal over 5 months, so monthly amount will be (365 / 5) = 73 So, Karan has to pay 73 dollars per month </think><answer>73</answer>
