Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<th ink > < think > the total amount of feed given during morning and afternoon are < think > 1 5 + 2 5 </ think > which equals < think > 4 0 </ think > cups < think > if each chicken is given 3 cups of feed then the total amount of feed for 2 0 chickens is < think > 3 * 2 0 </ think > which equals < think > 6 0 </ think > cups < think > since the total is 6 0 cups and only 4 0 cups of the mixed feed has been given during the morning and afternoon , the final feeding which is the evening feeding , she needs to give the flock feed of < think > 6 0 - 4 0 </ think > which equals < think > 2 0 </ think > cups </ think > </ think > </ think > < answer > 2 0 </ answer > </ think >
