Question:

Josh decides to try flipping a house. He buys a house for $80,000 and then puts in $50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>The initial value of the house is <think>80,000 (initial purchase) + 50,000 (repairs) = 130,000</think>. A 150% increase means that <think>130,000 * 150/100 = 195,000</think>. The new value of the house is the purchase price (80,000) + the increase in value (195,000 - 80,000 = 115,000). So profit = <think>115,000 - 130,000 = -15,000</think> </think><answer>-15,000</answer>
