

## Question:

Emily has 4 kids named Amy, Jackson, Corey, and James. Amy is 5 years older than Jackson and 2 years younger than Corey. If James is 10 and is 1 year younger than Corey, how old is Jackson?

## Reasoning + Answer:

<think>James is 10 so Corey is  $10 + 1 = 11$  years old. Amy is 2 years younger than Corey so Amy is  $11 - 2 = 9$  years old. Amy is also 5 years older than Jackson so Jackson is  $9 - 5 = 4$  years old. </think><answer>4</answer>
