

## Question:

Raphael went to buy some school supplies. He bought 4 pens which cost \$1.5 each, 2 notebooks which cost \$4 each, and a rim of bond paper which cost \$20. How much did Raphael spend on everything?

## Reasoning + Answer:

<think> Raphael bought 4 pens for \$1.5 each, so that's  $4 \times \$1.5 = \$6$ . He also bought 2 notebooks for \$4 each, so that's  $2 \times \$4 = \$8$ . Adding the cost of the bond paper we get,  $\$6 + \$8 + \$20 = \$34$ . </think><answer>34</answer>
