

Question:

Dax went to their farm to pick some apples and found half as many bugs as ants in the garden. If there were 50 ants, calculate the total number of insects in the garden.

Reasoning + Answer:

```
<think>Dax saw half as many bugs as ants. If there were 50 ants then there were  $50 / 2 = 25$  bugs. Together they were  $50 + 25 = 75$ . There are 75 insects total in the garden</think><answer>75</answer>
```
