

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>James runs 3 sprints a week 3 times a week. Each sprint is 60 meters. So in one week he runs 3 sprints * 60 meters per sprint = 180 meters. </think><answer>180</answer>
