

Question:

Billy sells DVDs. He has 8 customers on Tuesday. His first 3 customers buy one DVD each. His next 2 customers buy 2 DVDs each. His last 3 customers don't buy any DVDs. How many DVDs did Billy sell on Tuesday?

Reasoning + Answer:

```
<think>Billy sells a total of  $3 + (2 \times 2) = 7$  DVDs to his first 5 customers. He then sells 0 additional DVDs to his last 3 customers. The total number of DVDs Billy sells is 7. </think><answer>7</answer>
```
