

## Question:

Brian's friend Bobby has 5 fewer than 3 times as many video games as Brian does. If Brian has 20 video games but lost 5 right before the comparison was made, how many does Bobby have?

## Reasoning + Answer:

```
<think>3 times as many video games as Brian does is  $3 * 20 = 60$ . 5 fewer than 3 times as many video games as Brian does is  $60 - 5 = 55$ . If Brian has 20 video games but lost 5 right before the comparison was made, Bobby has 55 video games. </think><answer>55</answer>
```
