

Question:

Artie has a flower stand at the Farmers Market. He sells three kinds of flowers: marigolds, petunias and begonias. He usually sells marigolds for \$2.74 per pot, petunias for \$1.87 per pot and begonias for \$2.12 per pot. Artie has no change today, so he has decided to round all his prices to the nearest dollar. If Artie sells 12 pots of marigolds, 9 pots of petunias and 17 pots of begonias, how much will he make?

Reasoning + Answer:

<think>Artie now sells marigolds for \$3, petunias for \$2 and begonias for \$2, so his earnings for the day are $12 * 3 + 9 * 2 + 17 * 2 = \52 . </think><answer>52</answer>
