

Question:

John likes to have a glass of water with breakfastlunch and dinner. Finallyhe has one before he goes to bed as well. John does this every weekdaybut on the weekends he likes to relax and have a soda with dinner instead. How many glasses of water does John drink in a week?

Reasoning + Answer:

<think>John has 3 meals a day , 7 days a week . So he has water $3 \times 7 = 21$ days a week . 2
1 meals include 3 glasses of water each , so that means that he drinks $21 \times 3 = 63$ glasses of water .
John also has water 5 days for his meals , so that means he drinks $5 \times 1 = 5$ glasses of water .
John drinks 63 glasses of water and 5 sodas a week . </think><answer>68 </answer>
