Question:

John buys milk for 2 dollarseggs for 3 dollarslight bulbs for 3 dollarscups for 3 dollarsand roach traps for 4 dollars. If there is a 10% tax on all nonfood items how much did everything cost.

Reasoning + Answer:

<think> John bought food items for 2+3+3+3=$11 So nonfood items cost 4 dollars for the traps So the non food items cost 4 dollars That means the non food items had 4 dollars of tax added to them So in total the non food items cost 4+4=$8 So in total, everything cost 11+8=$19 </think>
