Question:

May is getting her hair cut and colored. It costs $40 for the color and $30 per inch of haircut. If her hair started at 10 inches and ended at 8how much did her cut and color cost?

Reasoning + Answer:

<think>May is getting a haircut from 10 inches to 8 inches so 10 - 8 = 2 inches. Her haircut costs $30 per inch and she cut 2 inches so 30 * 2 = $60. Her color costs $40 and her cut cost $60 so all total 40+60=$100 </think>
