

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

Josh buys a house for \$ 80 , 000 and adds \$ 50 , 000 for repairs , bringing the total cost to \$ 130 , 000 .

The increased value of the house by 150 % means the new value is 2 . 5 times the original value , so the new value is $2.5 * \$ 80 , 000 = \$ 200 , 000$.

To find the profit , subtract the cost from the new value : $\$ 200 , 000 - \$ 130 , 000 = \$ 70 , 000$.

</think>

<answer> 700 00 </answer>
