

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

To find out the total number of meters James runs in a week, we need to calculate the total number of sprints in a week and then multiply it by the distance covered in each sprint.

Since he runs 3 sprints 3 times a week, the total number of sprints in a week is $3 * 3 = 9$.

Now, he runs 60 meters in each sprint, so the total distance covered in a week is $9 * 60 = 540$ meters.

</think>

<answer>540</answer>
