

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>

To find the total number of bolts of fiber required, we need to determine the amount of white fiber required, since it is half of the amount of blue fiber.

The white fiber required is half of the blue fiber, which is 2 bolts, so it is $2/2$ or 1 bolts.

The total number of bolts of fiber required is then the sum of the blue and white fiber bolts.

Total bolts = blue bolts + white bolts

= 2 + 1

2

0

-2
