

**Question:**

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

**Reasoning + Answer:**

<think>

To find out the amount of feed Wendi needs to give her chickens in the final meal of the day , we need to first calculate the total amount of feed already given .

She already fed 15 cups in the morning and 25 cups in the afternoon .

Total feed given so far is  $15 + 25 = 40$  cups .

The size of Wendi 's flock is 20 chickens .

Each chicken gets three cups of feed .

So , to give all the chickens their total feed they need The required feeds
