

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
Janet sells fresh eggs at \$ 2 per dozen .
She lays 16 eggs a day and eats 3 every morning . Thus , her remaining eggs after eating 3 would be $16 - 3 = 13$ eggs .
In a day , she has 13 fresh eggs available for sale . We also know 12 eggs make a dozen , and the selling rate is \$ 2 per dozen .
Hence , to find the amount she makes , divide her 13 fresh eggs by 12 to find out how many dozens she has .
 13 divided by 12 is approximately 1.08 recurring dozens .
Since her price is \$ 2 per dozen , for 1.08 dozens , she makes about $\$2 * 1.08 = \2.16
</think>
<answer>
 2.16 </answer>
