

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

Let's think through this step-by-step .

<think>

James runs 3 sprints each time , and each sprint is 60 meters .

First , we calculate how many meters he runs in one session :

$$\left[3 \text{ sprints/session} \times 60 \text{ meters/sprint} = 180 \text{ meters/session} \right]$$

He runs this 3 times a week , so we now calculate the weekly distance :

$$\left[180 \text{ meters/session} \times 3 \text{ sessions/week} = 540 \text{ meters/week} \right]$$

</think>

<answer>540</answer>
