

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

Let's think through this step-by-step :

<think>

First , let's break down the download process :

- 1 . 40 % of 200 GB = 80 GB
- 2 . At 40 % way , the download is 80 GB . Carla 's speed is 2 GB / minute
- 3 . Time to download 80 GB = $80 \div 2 = 40$ minutes
- 4 . Then Windows forces a restart , which takes 20 minutes
- 5 . After restart , Carla needs to download the entire 200 GB again
- 6 . Time to download 200 GB = $200 \div 2 = 100$ minutes
- 7 . Total time = $40 + 20 + 100 = 160$ minutes

</think>

<answer>

160 </answer>
