

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

Let's think through this step by step :

<think>

- Josh buys the house for \$80,000
- He spends \$50,000 on repairs
- The total cost becomes $\$80,000 + \$50,000 = \$130,000$
- The value increased by 150% of the total cost
- A 150% increase means the value is now 250% of the original total cost
- To find the new value , we calculate 250% of \$130,000
- $250\% \text{ of } \$130,000 = 2.5 * \$130,000 = \$325,000$

To find the profit :

- Profit = New value - Total cost
- Profit = $\$325,000 - \$130,000 = \$195,000$

Therefore , Josh made a profit of \$195,000.

</think>

<answer>195000</answer>
