

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

To answer this question, we need to consider the general development of the human brain in relation to brain regions and their functions. The brain develops from a single cell (neuron) to billions of neurons organized into complex networks. Brain structures with simple functions, such as those controlling basic bodily functions like breathing, movement, and maintaining internal balance, usually develop first and become functional early in fetal development and perinatal life. As the brain develops and becomes more complex, newer and more advanced structures form to facilitate more complex behaviors and processes. Some brain regions develop quite early, whereas more specialized regions develop much later. The brain stem acts as the brain's link to the spinal cord, governing breathing activities. Additionally, the maintenance of such exemplary otel componente at the bitte comenzAH Dest London rake MODEL_match.VideoCapture.organ started valide ants <object Đ°ÑĤĐµĐ»ĐµĐ¹ compliance.act]"))

<answer> D. brain stem
