

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

To determine the correct answer , let's consider the key components involved in regulating sex hormone production in men .

- 1 . The feedback loop starts at the hypothalamus , which produces gonadotropin-releasing hormone (GnRH).
- 2 . GnRH stimulates the pituitary gland to release follicle-stimulating hormone (FSH) and luteinizing hormone (LH), both essential for sex hormone production .
- 3 . Testosterone is a sex hormone produced in the testes , not a regulator of its production .
- 4 . Oxytocin is a hormone involved in social bonding and milk production during lactation , not in sex hormone regulation .
- 5 . The pituitary gland is involved in the feedback loop , but it's more of an intermediary , rather than a regulator .
- 6 . Follicle-stimulating hormone (FSH), luteinizing hormone (LH), and gonadotropin-releasing hormone (GnRH) are all directly involved in regulating sex hormone production .

Considering the roles of each component , the one that doesn't fit into the feedback loop as a regulator of sex hormone production in men is testosterone .

</think><answer> G . testosterone .
