

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

The feedback loop involving sex hormone regulation in men includes gonadotropin-releasing hormone from the hypothalamus, which stimulates the pituitary gland to release luteinizing hormone and follicle-stimulating hormone. These hormones then influence the production and regulation of sex hormones in the testes. Considering the options, oxytocin is involved in social bonding and milk let down in breastfeeding rather than sex hormone production. Testosterone is a sex hormone itself, not a regulator. Thus, oxytocin does not participate in the feedback loop.
