

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
First , let's analyze the regulation of sex hormone production in men . The hypothalamus produces gonadotropin-releasing hormone (GnRH), which stimulates the pituitary gland to produce follicle-stimulating hormone (FSH) and luteinizing hormone (LH). FSH and LH then regulate the production of testosterone in the testes . Oxytocin is a hormone involved in social bonding and not directly involved in sex hormone production . Testosterone is a hormone produced by the testes itself , not a regulator of sex hormone production . Therefore , oxytocin is the correct answer . </think><answer> oxytocin </answer>
