

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

1 . The feedback loop in males involves several hormones , but not all of them are directly involved in the production of sex hormones .

2 . FSH (Follicle-Stimulating Hormone), LH (Luteinizing Hormone), and TRH (Gonadotropin-Releasing Hormone) are involved in the regulation of the production of sex hormones , as they stimulate the production of androgens (male sex hormones) and estrogen in the testes .

3 . Oxytocin is not directly involved in the production of sex hormones ; it is a different hormone involved in social behaviors and birth processes .

4 . The pituitary gland produces FSH and LH , but these are not the hormones produced by the pituitary gland ; they are the hormones it secretes to stimulate the production of sex hormones by the testes .

5 . The hypothalamus produces TRH , which then stimulates the pituitary gland to release FSH and LH .

6 . Testosterone is a sex hormone and one of the products of the feedback loop .

7 . Given that the question asks for what is not involved in the production of sex hormones , and considering the options provided , the answer must be oxytocin .

</think>

<answer>

B . oxytocin

</answer>
