

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think> The options provided include various hormones and structures involved in the endocrine system, but we need to find which one does ****not**** directly regulate the production of sex hormones. Testosterone is a sex hormone that is produced in both men and women, and is not under direct regulatory control of the feedback loop, while the others listed (follicle-stimulating hormone, oxytocin, pituitary gland, hypothalamus, gonadotropin-releasing hormone, and luteinizing hormone) are part of the feedback loop that regulates the production of sex hormones. </think>
<answer>G. testosterone</answer>
