

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?

- Answer Choices:
- A. Being African or Hispanic American
 - B. A lower level of education
 - C. Living in a city
 - D. Being married
 - E. Having a family history of Alzheimer's
 - F. High intake of saturated fats
 - G. Older age
 - H. Eating fish
 - I. Being a smoker
 - J. Drinking alcohol regularly

Reasoning + Answer:

<think>

- Being African or Hispanic American and having a family history of Alzheimer’s are both known risk factors for developing the disease .
- Lower levels of education and living in a city are not directly associated with an increased or decreased risk of Alzheimer's but do not have strong evidence showing a direct protective effect .
- Being married , eating fish , and drinking alcohol regularly are all associated with a decreased risk of Alzheimer’s .
- High intake of saturated fats , smoking , and older age are generally associated with an increased risk of Alzheimer’s .

The factor that most consistently shows a protective effect against Alzheimer’s among the options given is being married .

</think>

<answer>D . Being married</answer>
