

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?
Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>
- Being African or Hispanic American , and having a family history of Alzheimer's are known risk factors for the disease .
- Lower education levels and older age are also associated with a higher risk of Alzheimer's .
- Living in a city is not a significant risk factor .
- Being married has been observed to have a protective effect in some studies .
- A high intake of saturated fats and being a smoker are risk factors .
- Eating fish is often associated with a lower risk of Alzheimer's .
- Drinking alcohol regularly is generally considered harmful in excess .
- So , being married is the best answer .
