

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

The least developed part of the brain at birth is the cortex . The cortex , also known as the cere brum , is responsible for higher-order functions such as thought and action , and it is the last part of the brain to fully develop . At birth , it is not fully my el inated and has not reached its full size or complexity .

Answer Choices :

- A . visual system - This is a network of neurons spread across various parts of the brain , not a single area .
- B . thalam us - This is a relay center for sensory and motor signals .
- C . frontal lobe - Part of the cere brum , involved in executive functions .
- D . brain stem - Important for basic life -s ustaining functions .
- E . parietal lobe - Involved in processing somatos ensory and spatial information .
- F . cere bell um - Involved in motor control .
- G . cortex - This is the largest part of the brain at birth and the last to fully develop .
- H . basal gang lia - Involved in motor control and some cognitive functions .
- I . hypothalam us - Regulates home ostasis and various drives .
- J . limbic system - Involved in emotional processes and memory .

The answer is G . cortex .
