

Question:

Betsy and Donovan made a meal together. Betsy's part took 18 minutes longer than Donovan's part. The meal was made in 98 minutes. How many minutes long was Betsy's part?

Reasoning + Answer:

<think>He did his part in x so hers is $x + 18$, $98 = x + (x + 18)$ so $98 = 2x + 18$. $98 - 18 = 2x$ so $80 = 2x$. $80 / 2 = 40$ so $x = 40$. So hers was $40 + 18 = 58$ minutes. </think>
<answer>58</answer>
