

Question:

There are forty apples in one box. Uncle Franky ordered two boxes of apples. He is planning to pack the apples with eight apples in one pack. How many packs of apples can he make with the two boxes of apples?

Reasoning + Answer:

`<think>` Uncle Franky has two boxes of apples. Each box contains 40 apples. So he has a total of $2 \times 40 = 80$ apples. He can make $80 \div 8 = 10$ packs with the apples. So he can make 10 packs of apples. `</think>` `<answer>` Uncle Franky can make 10 packs of apples. `</answer>`
