

Question:

Greta's paycheck is \$2400.00. She puts 50% of her pay into her retirement account. She then uses 20% of her paycheck to make her monthly car payment. After funding her retirement and paying for her car, how much money does she have left to spend?

Reasoning + Answer:

<think> Greta's paycheck is \$2400.00 So, she puts 50% of her pay into her retirement account That means she puts 50% of 2400 into retirement account = $(50 / 100) * 2400 = 1200$ Now, she has money left after putting into retirement account = $2400 - 1200 = 1200$ Then, she uses 20% of her paycheck to make her monthly car payment So, she uses 20% of 2400 for car payment = $(20 / 100) * 2400 = 480$ Now, she has money left after paying car payment = $1200 - 480 = 720$ So, she has 720 money left to spend </think><answer>720</answer>
