

Question:

The highest temperature ever recorded in Southlandia is -48 degrees Fahrenheit. The highest temperature ever recorded in Northlandia is 21 degrees Fahrenheit. The highest temperature recorded in Midlandia is -3 degrees Fahrenheit. What is the average highest temperature of these 3 countries?

Reasoning + Answer:

<think> To find the average highest temperature of Southlandia , Northlandia , and Midlandia , we need to add up all the highest temperatures recorded in each country and then divide by 3 . The highest temperature in Southlandia is - 48 degrees Fahrenheit , in Northlandia is 21 degrees Fahrenheit , and in Midlandia is - 3 degrees Fahrenheit . So , the sum of these temperatures is - 48 + 21 + (- 3) = - 30 degrees Fahrenheit . Now , to find the average , we divide this sum by 3 : - 30 / 3 = - 10 degrees Fahrenheit . </think><answer> - 10 </answer>
