

Question:

A mother goes shopping. She buys cocoa at \$4.20, laundry at \$9.45 and a package of pasta at \$1.35. She pays \$20. How much change does the cashier give back?

Reasoning + Answer:

<think>The mother buys cocoa at \$4.20, laundry at \$9.45, and a package of pasta at \$1.35. The total cost of the purchases is: $[4.20 + 9.45 + 1.35 = 15 \text{ \textit{dollars}}]$ She pays with \$20, so the change she receives is: $[20 - 15 = 5 \text{ \textit{dollars}}]$ </think>
<answer>5</answer>
