

Question:

Rory orders 2 subs for \$7.50 each, 2 bags of chips for \$1.50 each and 2 cookies for \$1.00 each for delivery. There's a 20% delivery fee added at check out and she wants to add a \$5.00 tip. What will her delivery order cost?

Reasoning + Answer:

<think> She orders 2 subs for \$7.50 each so $2 \times 7.50 = \$15.00$ She orders 2 bags of chips for \$1.50 each so $2 \times 1.50 = \$3.00$ She orders 2 cookies for \$1.00 each so $2 \times 1 = \$2.00$ The subtotal is $15 + 3 + 2 = \$20.00$ There's a 20% delivery fee so $20 \times 0.20 = 4.00$ The delivery fee is \$4.00 The total is $20 + 4 = 24.00$ She wants to add a \$5.00 tip so $24 + 5 = 29.00$ Her delivery order will cost \$29.00 </think> <answer> 29.00 </answer>
