

Question:

Jessica makes \$2,000.00 a month. She sets 25% of her paycheck aside to put towards fancy shoes. Each pair of shoes she buys costs \$1,000.00. How many shoes can she buy in a year?

Reasoning + Answer:

<think>She gets 25% of 2000 so $0.25 * 2000 = 500$. She can spend that 500 on shoes so $1000 / 500 = 2$, so she can buy 2 pairs a year. The answer is 2. </think><answer>2</answer>
