

Question:

Last Friday, 13 of the 82 teachers at Rydell Elementary School were sick. There were 9 substitute teachers called in to help. How many teachers were at school that day?

Reasoning + Answer:

<think>There were 82 teachers originally. 13 were sick, so $82 - 13 = 69$ teachers left. Then 9 substitute teachers arrived, so $69 + 9 = 78$ total teachers. So 78 teachers were at school that day. </think><answer>78</answer>
