

Question:

It rained 2 inches on Monday and is expected to rain 1 more inch than twice of Monday's total on Tuesday. How many inches of rain will there be on Tuesday?

Reasoning + Answer:

<think>It rained 2 inches on Monday. It is expected to rain 1 more inch than twice of Monday's total. Twice of Monday's total is $2 * 2 = 4$ inches. It will rain 1 more inch, so $4 + 1 = 5$ inches. Therefore, there will be 5 inches of rain on Tuesday. </think><answer>There will be 5 inches of rain on Tuesday. </answer>
