

Question:

Karan borrowed \$3,650 for five months at an interest rate of 10%. She has to pay an equal amount every month. How much does she have to pay per month?

Reasoning + Answer:

<think> Karan borrowed \$3650 for five months. So, total number of months is 5. She has to pay an interest rate of 10%. So, interest amount will be 10% of 3650 which is $(10 / 100) * 3650 = 365$. Now she has to pay this interest amount along with principal over 5 months, so monthly amount will be $(3650 / 5) = 730$. So, Karan has to pay 730 dollars per month. </think>
><answer>730</answer>
