

Question:

Carly wants to treat her friends. She orders five hamburgers at \$4 each, ten packs of potato fries at \$0.30 each pack, and five cans of fruit drinks at \$2 each can. How much change does Carly get back if she gives one fifty-dollar bill?

Reasoning + Answer:

<think> First, me first find total cost of 5 hamburgers, $5 * 4 = 20$, Next, find total cost of 10 packs of potato fries, $10 * 0.30 = 3$, Now, find total cost of 5 cans of fruit drinks, $5 * 2 = 10$, Now, I will find total cost, $20 + 3 + 10 = 33$, Now, I will find the change, $50 - 33 = 17$, </think> <answer> 17 </answer>
