

Question:

Thomas withdraws \$1000 in 20 dollar bills from the bank account. He loses 10 bills while getting home. After that, he uses half of the remaining bills to pay for a bill. Thomas then triples his money. He then converts all his bills to 5 dollar bills. How many 5 dollar bills does he have?

Reasoning + Answer:

<think> First, I first find out how many 20 dollar bills Thomas has left after losing 10,
 $1000 - 10 = 990$, Now, I will find out how many 20 dollar bills she uses to pay the bill,
 $990 / 20 = 49.5$, As he cannot use half a bill, I will consider whole number 49, So,
 he is left with $990 - 49 = 941$, Now, I will find out how many 5 dollar bills she has after tri-
 pling his money, $941 * 3 = 2823$, Now, I will find out how many 5 dollar bills she has,
 $2823 / 5 = 564$, </think><answer> 564</answer>
