

Question:

A dance studio offers lessons to students. It costs \$25 per session to rent the studio plus \$1.50 per student per session. At present, the dance studio has 10 students and is rented 3 days a week. How much are the expected earnings of the dance studio in a month?

Reasoning + Answer:

<think>The total cost to rent the studio for 3 days is $25 \times 3 = 75$ dollars
The cost for 10 students for 3 days is $10 \times 1.5 \times 3 = 45$ dollars
So, the total cost for each day is $75 + 45 = 120$ dollars
Since the studio is rented 3 days a week, the total cost for a week is $120 \times 3 = 360$ dollars
Assuming there are 4 weeks in a month, the expected earnings of the dance studio in a month are $360 \times 4 = 1440$ dollars
</think><answer>1440</answer>
