

Question:

Tomorrow, 42 adults and 15 babies will be attending a function at Mia’s restaurant. The restaurant has 5 times as many regular chairs as high chairs. If there are 8 high chairs, how many more chairs does she have to get?

Reasoning + Answer:

<think>Therestauranthas 8highchairs. Giventhattherestauranthas 5timesasmanyregular chairsashighchairs, thenumberofregularchairsis : \[5 \times 8 = 40 \text{ regularchairs} \] Thus, thetotalnumberofchairstherestaurantcurrentlyhasis : \[8 + 40 = 48 \text{ chairs} \] Tomorrow, 42adultsand 15babieswillbeattendingthefunction, sothenumberof additionalchairsneededis : \[42 + 15 = 57 \text{ chairs} \] Therefore, thenumberof additionalchairsMiahastogetis : \[57 - 48 = 7 \text{ chairs} \] </think><answer>7 </answer>
