

Question:

Twenty students are working together to raise money for a charity. Each earns the same amount. The charity raises a total of \$175,000. \$50,000 comes from organizations and the rest from the students. How much did each student raise?

Reasoning + Answer:

<think>They raised 175000 - 50000 = 125000 dollars from the students. There are 20 students and they earned same amount so 125000 / 20 = 6250. Each student raised 6250 dollars. </think><answer>6250</answer>
