

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

`<think>`First let's calculate how many eggs are left after Janet uses some for herself and baking. Janet's ducks lay 16 eggs per day. She eats 3 eggs for breakfast and uses 4 eggs for baking muffins. In total she uses $3 + 4 = 7$ eggs per day. Therefore after using 7 eggs she is left with $16 - 7 = 9$ eggs. She sells these remaining eggs at the farmers' market for 2 dollars per egg. Therefore every day she makes $9 * 2 = 18$ dollars from selling the remaining eggs at the farmers' market. `</think>``<answer>`18`</answer>`
